V1: a gap in the boundary.

Permissions were right. Identity was trusted.

AI agent supplies the user ID

secure_search(query, user_id="ceo")

Sentinel enforces that identity's access

The tool trusted a model-controlled argument.

The wrong user's documents can return

A prompt injection or mistake can change the ID.

The mistake I had to fix:

Authorization depended on who the model said was asking.

Sentinel + sentinel-engine + a working resume demo

V2: identity from the connection.

The search tool no longer accepts a user ID.

Resolve the caller outside the model

Verified JWT subject, or configured stdio launcher

sentinel-engine resolves live permissions

Build the access filter inside the vector query

Re-check every returned chunk

Only authorized results leave the retrieval layer

Missing identity or failed permission lookup?

Deny access. Permissions are read on every call.

Revocation applies to the next request.

---

github.com/aashishravindran/sentinel-resume

Sentinel + sentinel-engine + a working resume demo

One engine. Three entry paths.

Each adapter obtains identity outside the model.

MCP server

stdio: configured launcher | HTTP: verified user JWT

Amazon Bedrock AgentCore Gateway

MCP tools: REQUEST filter + RESPONSE re-check

sentinel-resume web app

Cognito login + recruiter grants with an expiry

sentinel-engine

Live scope → query filter → chunk authorization

Gateway mode runs the engine in interceptors.
It does not add an MCP-server hop.

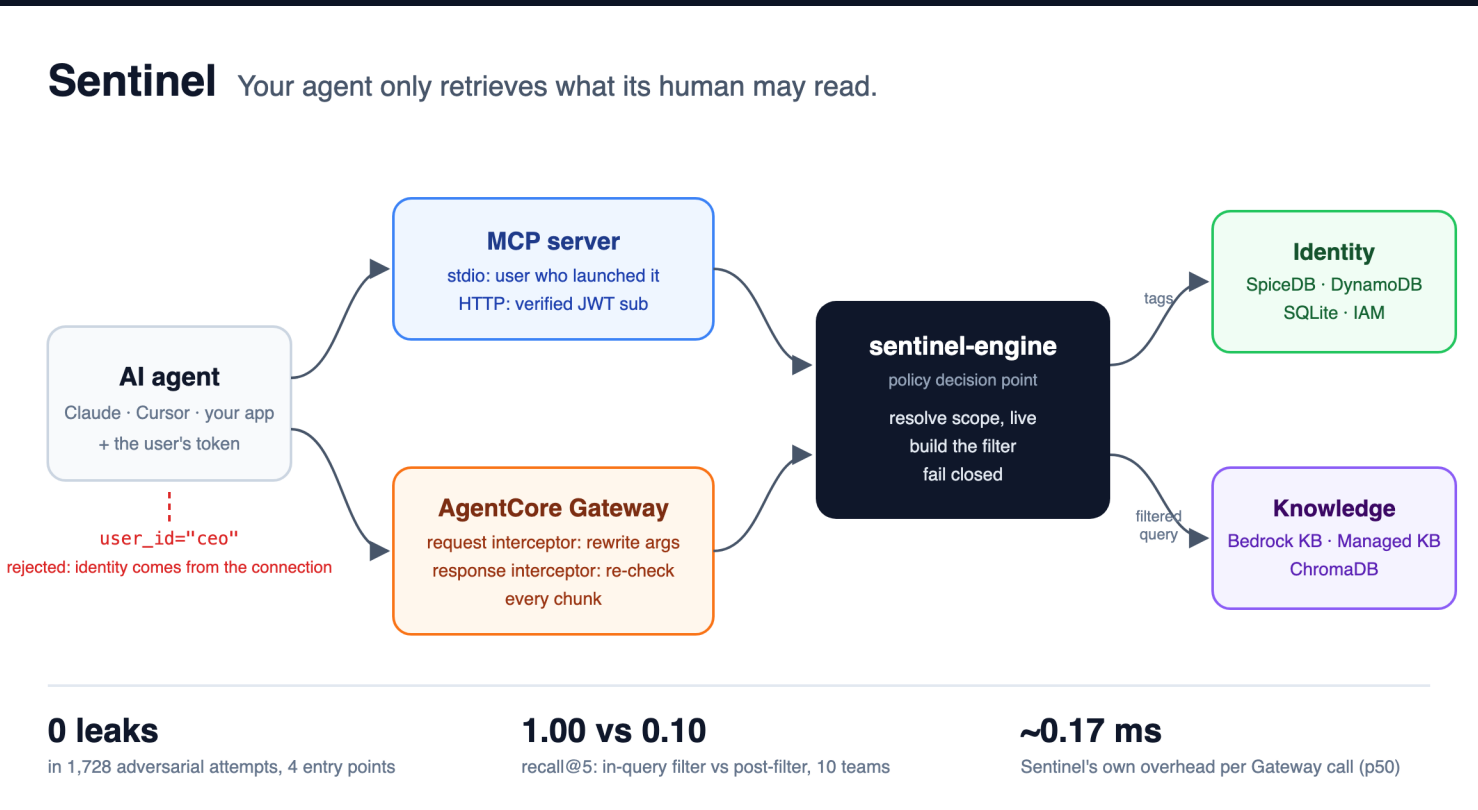

---

github.com/aashishravindran/sentinel-resume

Sentinel + sentinel-engine + a working resume demo

Two adapters. One policy engine.

Original architecture from the Sentinel repository.

1. Establish identity

MCP transport or Gateway verifies who is calling.

2. Resolve permissions

sentinel-engine reads live scope and builds the query filter.

3. Check returned context

Every returned chunk is checked before leaving retrieval.

Diagram and benchmark figures: Sentinel main repo.

github.com/aashishravindran/Sentinel

Try the boundary yourself.

“What base salary was in the 2024 offer?”

Basic recruiter

Resume + projects; offer excluded from model context

Recruiter with an active offer grant

Offer eligible for retrieval and a grounded answer

Grant expires or is revoked

Next question uses the updated permissions

Inspect “What the assistant saw”.

Access scope. Search filter. Retrieved context.

Real resume. Synthetic restricted documents.
